

RAPID APPLICATION DEVELOPMENT TEAM KONNECT

EMPOWERING BUSINESS

APPS FOR EVERY BUSINESS

Today more than ever, companies rely on a multitude of applications to streamline operations, manage customer engagement and get their business done. Multiple applications also means that departments and teams tend to work in isolation with little or no connectivity, operating to inefficient business processes, resulting in poor decision making for the business.

The Team Konekt Rapid Application Development Platform has been designed to bridge the gap between your business process needs and your application development requirements. This is achieved by providing you with a highly customisable no-code environment, empowering you to build out a suite of connected business applications that collectively fashion the ideal solution for your business, all at incredible speed.

SIMPLER, SMARTER AND MORE RELIABLE APPS

Team Konekt is a suite of highly flexible building blocks that enables any organisation to build complex business process solutions in days instead of months.

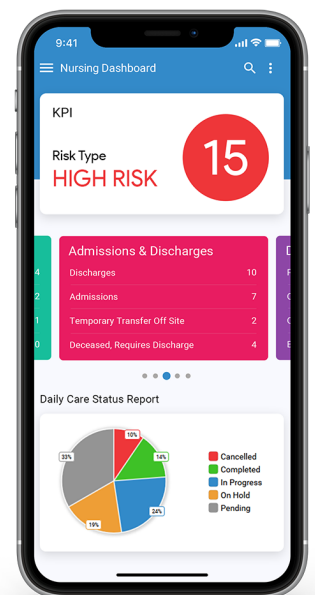

Create your very own custom business applications, and instantly enhance them using any of our built-in features such as task management, job scheduling, document management, video's and photos' compliance checklists, instant messaging or any of the other 20 pre-configured features available.

Map out business processes to deliver targeted instructions using triggers, alerts or complex decision making rules and secure access using permissions, custom roles and robust industry standard single sign-on security.

And finally, Go Mobile, using our native iOS or Android mobile applications with versions of your business applications that are built instantly to collect and store data locally, even working in 'offline mode'.

Why not contact us today for a demonstration of our incredible Team Konekt Enterprise platform.

MODULE MANAGER

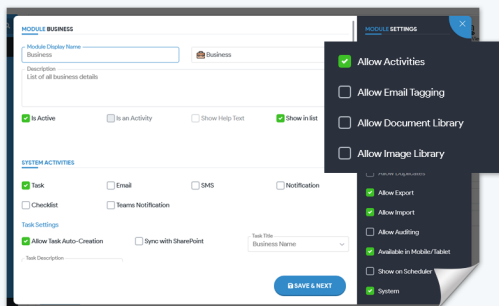

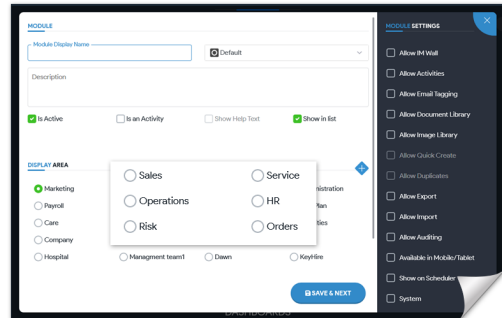

The modular nature of the Team Konnect platform puts you in control at all times

Team Konnect allows you to work at your own pace to meet the needs of your business. Start out by creating one or two modules and then progress to building sophisticated end to end connected applications.

MODULE BUILDER

Create logical business divisions and group your modules and applications into an organised structure

The Team Konnect platform enables you to create a hierarchical structure that represents the divisions or departments that exist within your business or organisation. This is where you can present your applications and control access for your target users.

MODULE TEMPLATES

Using our prebuilt templates, you can transform your modules into sophisticated applications

The Team Konnect platform allows you to customise your modules using our dynamic configurable templates. Enhance every module you create by enabling fully functional features including task management, document management, multimedia assets, scheduling and much more.

FORMS DESIGNER

Drag & Drop design capabilities enables users to create applications at unprecedented speed

Team Konnect provides users with an intuitive forms designer interface that includes a wide selection of field types to choose from. Drag & drop your fields onto the canvas designer and structure your forms using sections and tabs into the required layout needed for your data collection requirements.

VIEW DESIGNER

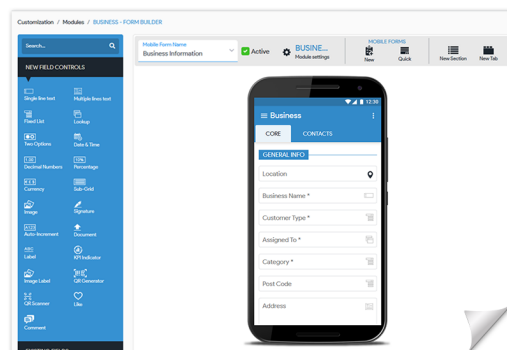

Create an unlimited selection of Views to enable your users to navigate the records they manage.

The Team Konnect platform enables you to create and customise an unlimited selection of views required for the various teams and roles within your business. Drag and drop fields into your views where you can configure column widths, sort orders, filter conditions and much more.

MOBILE APP DESIGNER

Build Native Mobile Applications for iOS and Android that work 'Offline' without the need to write any Code!

Yes, the Team Konnect platform includes the capability to build native mobile applications for both iOS and Android platforms simultaneously. These mobile applications are true offline apps that can gather data while in disconnected mode, employing a dynamically built mobile database that sync's data back to HQ when a connection returns.

USER MANAGEMENT

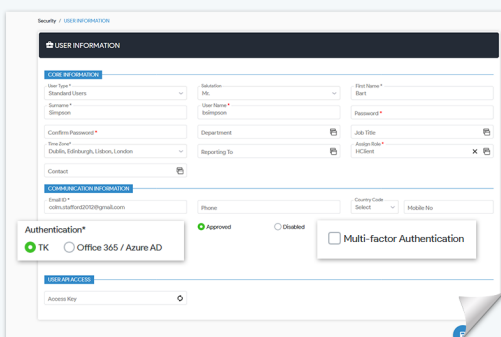

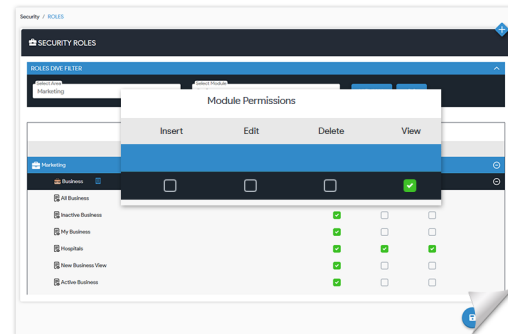

Create the users required to access your web portal and mobile applications

The Team Konnect platform comes with a comprehensive user management module that allows you to create the user accounts required. Accounts can be setup with roles and rights assigned for both internal staff and external stakeholders depending on the specific access requirements of your application.

RIGHTS MANAGEMENT

Control access to your modules and solutions right down to field level if required.

The Team Konnect platform includes an extensive rights management module that enables granular control over the rights that can be assigned to both users and roles. Delete, Insert, View and Edit rights can all be assigned across, web and mobile forms and views even right down to field level.

SECURITY MANAGEMENT

Avail of a flexible security model to secure access for users to your platform applications

The Team Konnect platform can be configured using a variety of security and authentication methods depending on the client's architecture. Implement Single Sign-on using your organisations on premise Active Directory, Office365 or Azure AD and deploy Multi Factor Authentication from Microsoft, Google or third party services such as Twilio.
